## Preface

JMT Network Services Public Company Limited and its subsidiaries (the "Company") recognize the importance of environmental care and protection in all business processes, with a commitment to social responsibility, the environment, and long-term sustainability. The organization has established a clear environmental policy that focuses on integrating environmental principles into its operations to align with the national mission to reduce greenhouse gas emissions and prevent and reduce pollution resulting from business activities. This includes the efficient management of energy and natural resources.

This environmental policy reflects the Company's practices in environmental conservation and the promotion of environmental awareness within the organization.

Additionally, the Company supports sustainable development in all aspects of its operations by integrating environmental principles into its long-term business processes to ensure that the growth of the Company occurs alongside the care for the environment and the creation of sustainability for the future.

## Objective

The primary objective of this environmental policy is to establish a clear framework and guidelines for the Company's business operations, with a focus on ensuring that the Company's activities are conducted responsibly towards the environment and minimize the potential impacts from various operational processes. Additionally, it encompasses the promotion of efficient natural resource management, pollution reduction, and the sustainable and efficient use of energy.

## Scope of Work

The scope of this environmental policy applies to JMT Network Services Public Company Limited and its subsidiaries, from the executive team down to all levels of employees, to ensure that everyone involved adheres to the environmental conservation guidelines and minimizes any potential negative impacts. It covers all aspects of the organization's operations that may affect the environment, with a focus on the efficient management of resources and energy.

## Environmental Management Goals

1. Achieve carbon neutrality by 2050.
2. Achieve net zero greenhouse gas emissions by 2065.
3. Continuously reduce total final energy consumption.
4. Control the rate of water consumption reduction.
5. Reduce the amount of waste generated from the Company's operations.
6. No violations of environmental laws by the Company, its employees, or business partners.

## Environmental Policy Declaration of JMT Network Services Public Company Limited

JMT Network Services Public Company Limited and its subsidiaries (the “Company”) recognize the importance of integrating environmental responsibility into all aspects of its operations in a systematic and sustainable manner. The Company aims to foster a corporate culture that promotes environmental conservation across all levels—from operational staff to top executives—as well as among all stakeholders. This involves raising environmental awareness, reducing unnecessary resource consumption, and managing resources efficiently, with a strong emphasis on utilizing renewable resources and clean energy to align with sustainable development goals.

In addition, the Company has initiated and supported the continuous improvement of its operational processes to prevent pollution at the source. This includes optimizing operational workflows and managing natural resources efficiently, such as by reducing greenhouse gas emissions from company activities, in accordance with national greenhouse gas management strategies.

Under this environmental policy framework, the Company regularly evaluates and reviews its environmental practices. This involves monitoring performance, analyzing data, and adapting strategies to address changing environmental conditions at both the national and global levels, with the ultimate goal of achieving long-term sustainable development.

This policy has been formally approved and signed by the Company’s senior management, who hold the highest authority in overseeing and monitoring environmental practices. It has been officially announced and implemented with a comprehensive set of practices that emphasize continuous operational improvement, in order to create positive environmental, social, and economic impacts in the long run.

JMT Network Services Public Company Limited recognizes the importance of conducting business alongside environmental stewardship. The Company is committed to minimizing environmental impacts across all operations through the efficient management of natural resources and energy, ensuring value optimization and reducing unnecessary losses, thereby supporting long-term environmental sustainability. An overarching policy has been established that applies to all levels of the organization, including executives and employees, to ensure understanding and systematic, continuous adherence to the prescribed guidelines, as follows:

1. The Company strictly complies with regulations stipulated by law, including local environmental laws. Compliance is regularly monitored and assessed to ensure adherence to established standards.
2. The Company conducts business in an environmentally and socially responsible manner by managing natural resources and waste based on the principles of a Circular Economy. This approach maximizes resource efficiency, reduces waste, and encourages the reuse of materials to the fullest extent possible, while leveraging technology and innovation to improve production and management processes, thereby minimizing impacts on the environment and surrounding communities.
3. The Company implements measures to prevent and mitigate negative impacts from its operations and those of its partners, arising from production, procurement, and service activities. This applies to both the Company and its suppliers, with the aim of protecting the environment, communities, and public health by establishing environmentally friendly operational standards and promoting the use of sustainable technologies.
4. The Company supports environmental awareness by providing training, communication, and educational initiatives for employees and stakeholders to prevent potential negative impacts on the environment and foster a sustainable society.
5. The Company is committed to transparent disclosure of operations related to natural resource and environmental management, presenting both achievements and factual information, and reporting progress and performance to all stakeholder groups through various channels, such as the annual sustainability report.
6. This policy applies to the Company and is communicated to the public so that stakeholders are informed. Compliance with this policy is measured and verified by internal and/or independent external bodies. The Company considers adherence to this policy the duty and responsibility of all employees, as well as key business partners, who are required to comply strictly, in order to ensure sustainability both at the organizational level and for society at large.

	Environmental Policy	
	Document No. : PD-IR-028	Revision No. : REV00
	Effective Date: May 14,2025	Page : 6/10

The environmental policy covers the following practices and issues:

## 1. Energy Management

1.1. The Company places great importance on efficient and sustainable energy management, aiming to reduce energy consumption and dependence on external energy sources. It promotes the efficient and economical use of energy by selecting energy-saving technologies and equipment, and supporting the use of renewable energy, such as solar power.

1.2. The Company encourages and campaigns for employees to raise awareness of energy conservation and to collectively use energy efficiently. This includes optimizing energy use in operational processes, such as using electricity only as needed, turning off unused electrical equipment, and improving air conditioning systems for energy efficiency, among other measures.

## 2. Climate Change

Climate change has become a critical global agenda that demands attention from every country, as it is likely to have significant impacts on the economy, society, and the environment in the future. Therefore, the Company recognizes its responsibility to conduct business sustainably and to contribute to mitigating issues and potential impacts arising from climate change. Accordingly, the following practices have been established:

2.1. Increase the proportion of clean energy use, setting long-term targets to continuously reduce reliance on externally purchased energy. The Company also promotes activities that contribute to carbon emission reduction whenever possible, ensuring operations align with sustainable development principles.

2.2. The Company is committed to driving and fostering close collaboration with customers, key partners, and business allies to jointly reduce greenhouse gas emissions across the supply chain. This approach helps enhance sustainability across all aspects of operations and generates long-term positive outcomes for the environment.

### 3.Waste Management

3.1. The Company has promoted proper waste disposal among employees by raising awareness of reducing waste at the source, segregating waste before disposal, and managing waste correctly according to its type. It also supports maximizing the reuse of waste through recycling and upcycling processes.

3.2. The Company focuses on overseeing all departments and business units under its operations to ensure compliance with appropriate waste management practices. Employees and relevant units are encouraged to apply the 7Rs principle in waste reduction, which is an approach that optimizes waste management and is environmentally friendly, as follows:

- **R-Reduce:** Minimize the use and consumption of unnecessary resources, which is the first step in reducing waste generation. This involves evaluating what is truly necessary and reducing the purchase of products with excessive packaging.
- **R-Reuse:** Maximize the value of resources by reusing items or materials instead of discarding them, thereby reducing the creation of new waste.
- **R-Refill:** Refill used containers, particularly for products with refillable packaging, to reduce the need for new packaging.
- **R-Return:** Return packaging to the manufacturer, such as using glass bottles instead of plastic ones, allowing consumers to return bottles for cleaning, sterilization, and reuse, reducing plastic use and promoting resource circularity.
- **R-Repair:** Repair damaged items instead of discarding them, allowing continued use. This not only reduces waste but also saves costs on purchasing new items.
- **R-Replace:** Use alternatives to single-use plastics, such as reusable cups or water bottles instead of PET or PP plastic cups, reducing daily plastic consumption.
- **R-Recycle:** Choose resources that can be recycled to reduce waste volume and minimize environmental pollution. Recycling is an effective method for reusing materials and decreasing the demand for new resources.

Implementing the 7Rs principle not only helps reduce waste but also promotes responsible and environmentally friendly resource use, which is the Company's goal to create a sustainable future for everyone in society.

#### 4. Water Resource Management

The Company is committed to promoting efficient water usage among employees to maximize benefits and reduce water wastage from unnecessary usage. Regular inspections and maintenance of water equipment are carried out to ensure that the equipment is in good working condition and to minimize water loss due to equipment malfunctions. To ensure a balance between water usage and natural conservation, the Company has established the following practices:

4.1. The Company aims to promote efficient water usage among employees by providing knowledge on water-saving methods and raising awareness about appropriate water usage. This enables employees to apply these practices in their daily lives and reduce unnecessary water consumption.

4.2. The Company is also determined to reduce wastewater discharge into public water sources by improving and enhancing wastewater treatment processes for greater efficiency. This includes installing standard wastewater treatment systems to ensure that water released from the plant meets high quality standards and does not negatively impact surrounding water sources or the environment. The Company has installed sedimentation ponds and aeration tanks to treat the water before discharging it into the external area. This important measure ensures that wastewater generated from the Company's operations does not have a negative impact on nearby communities or the surrounding environment.

#### 5. Utilizing Innovation and Technology to Reduce Resource Consumption

The Company is committed to reducing the use of natural resources efficiently by developing new innovations and continuously improving processes. This includes managing paper usage within the organization effectively to minimize paper consumption in business activities as much as possible.

The Company aims to develop systems that support business activities efficiently while reducing reliance on paper. This not only helps reduce the consumption of important natural resources but also allows the business to adapt to current and future business models appropriately. Implementing such systems demonstrates the Company's responsibility toward the environment and strengthens sustainability for the long term by creating new approaches that enable the Company to operate efficiently and in an environmentally friendly manner at the same time.

	Environmental Policy	
	Document No. : PD-IR-028	Revision No. : REV00
	Effective Date: May 14,2025	Page : 9/10

This environmental policy is therefore considered one of the core missions of JMT Network Services Public Company Limited, reflecting the Company's responsibility toward the environment and society. It aims to ensure that executives and employees at all levels recognize the importance of environmental stewardship and take it seriously in every operational process, producing tangible results and embedding environmental practices as a sustainable part of the organizational culture.

This policy shall be effective from May 14, 2025 onwards.

.....

The approver of the Environmental Policy.

Mr. Adisak Sukumvitaya

Chairman of the Board of Directors
